

Amendment to the Specification

The Examiner amends the specification to change page 1, line 2. The Examiner alleges that at the above mentioned place in the specification, Application No. "11/300,522" appears and should be changed to "11/330,552."

However, no applications are mentioned at this portion of the specification of the application. The Examiner's amendment appears to be in error and is not relevant to the present application. The Applicant requests the present application be amended (or in this case not amended as discussed in the Examiner's amendment) so that the first paragraph reads (as filed in the substitute specification filed July 14, 2004) as follows:

"The present invention relates to a high-density recording medium and a method and apparatus for controlling data playback/recording thereof, and more particularly to a high-density optical disc, such as a BD (Blu-ray Disc), and a method and apparatus for controlling data playback/recording thereof, wherein it is possible to perform a data playback/recording operation optimal to the recording capacity of the high-density optical disc."

The above paragraph includes page 1, line 2 mentioned by the Examiner. The above paragraph has not been annotated to show removal of the Examiner's added text because it is not clear where the Examiner's added text is to appear in line 2. However, the Applicant's explanation makes clear the amendment made herein without the need to annotate paragraph [0001] showing the Examiner's text removed.
